SUBSCRIPTION \$2.00 PER YEAR

OLD TIMERS HOLD PICNIC AT HOME DUNCAN McBEAN

The annual Old Timers' picnic was held at the farm home of Mr. and Mrs. Duncan McBean Sunday afternoon. The attendance of old timers was not very large owing, no doubt, to the busy season and the unfavorable weather, the day being cold and cloudy. However, those who attended enjoyed themselves greatly chatting and watching the younger folks entertain themselves. About five o'clock lunch was served at a table set on the lawn. The table fairly groaned under the load of treats on it. Super-people over, Mrs. Duncan Clark on behalf of the old timers presented Mr. and Mrs. McBean with a beautiful bouquet.

The following recipe was donated by Mrs. Charlie Jones of Cluny, and highly recommended by the Old Timers and Mr. Yates representing the Board of Trade:

Flapper pie: 15 large of 23 small Graham wafers, half cup of sugar, half cup of butter, Crumble together (save part for upper crust) spread on pan and bake for 15 minutes. Fill with 3 egg yolks, pinch salt, one pint of egg flour, three quarter cup sugar, juice and rind of one lemon, and a teaspoonful of vanilla. Cut in a delicious batter until thick fold in sufficiently beaten egg whites. Sprinkle remainder of crumbs on top and bake five minutes.

It was generally agreed by the Old Timers that the picnic was held a little late this year and that next year it should be held about the middle of July. Sam Dafoe, the association secretary of the association said to that plenty of old timers were provided for all to sit on and that every one got all the ice cream they could slow away.

FROM THE FILES OF GLEICHEN CALL TWENTY YEARS AGO

Mrs. R. W. Brown has been seriously ill for the past week but a speedy recovery is looked for.

Mrs. Roy M. Allen has returned from a short stay at Banff with her children.

Mrs. F. Keniston has arrived from Tacoma, Wash., to visit Mrs. F. L. Mallory.

J. M. Telford arrived last week from New Westminster to look after his farm interests here and expects to return in a few days. He says he has a fine crop of berries and other fruit this year.

Mr. and Mrs. J. R. Leggatt are happy in the arrival of a fine baby boy.

H. B. Grant of Craigenton is expected back soon from Montana. He will likely bring his family along with him.

Upwards of 2000 acres of land in the Craigenton district has been irrigated this season and as a result there are some fine looking crops.

H. Levalle and his mother, from Maple Valley, with Miss and Mrs. Heather were visitors to town on Sunday.

Prairie fires were responsible for a great amount of damage last week south of the Bow river. Hundreds of acres of pasture lands being swept clean. McHugh Bros. and Hardwick Bros. losses east of the river were all burnt and the former also lost heavily at their west ranch and the Indian reserve and some farmers were also losers. Farmers for miles around turned out to fight the fires, and horses and gasoline outfits were brought into action and great results with good effect. The origin of the west fire is unknown and it is said started over a mile from any road. Too great care cannot be taken to prevent prairie fires during this exceptionally dry season.

The local ball club accompanied by a large number of fans, motored to Vulcan Friday. The boys played class A ball, but due to a rain decision by the umpire allowing two scores for Vulcan lost the game 2 to 3.

A general meeting of all farmers in the district will be held Saturday evening to find out how much oats and hay will be needed and to devise means to obtain same by held Saturday evening. The meeting will be held in the new hall.

A committee composed of Messrs. Young, Henderson and Dafoe have

News Items of Local Interest

Mr. and Mrs. Pinesau and daughter, Mervin, of Lethbridge spent the past week at the home of Mr. and Mrs. J. J. Hollimon.

A number of business places in town report having been very busy last Saturday. In the evening there seemed to be more cars in town than there usually are on Saturday nights.

Misses Joanna and Ella Holland are here visiting with their sister-in-law, Mrs. N. A. Hiddell and their nephews and nieces at Gleichen and Mowbray.

Bill Taylor spent the past week in town visiting his parents Mr. and Mrs. E. W. Luff Sunday morning to T. A. B. C. where he will pick up his tools on his holidays home.

Miss Allison Evans returned to Edmonton last Friday after spending the past three weeks holidaying in Gleichen.

Gordon Richards, who for the past two weeks has been visiting Albert and Bobbie Riddell, has returned to his home at Arrowwood.

During the past few days quite a lot of grain cutting has been done and most of it stacked. Cutting will become general for a few days yet, many fields have green grain ready here and there. A large number of farmers expect to thresh again from 20 to 35 bushels per acre. Some who were slightly hailed are in a quandary whether to cut or not, but most of them who thought there was a possibility of harvesting some wheat are cutting. The latter part of last week there was a shortage

of stockers. One time a farmer found it very difficult to find help.

Many sportsmen in this district are under the impression that the duck shooting season opens on September 15. They are wrong. The National Parks Service of the Department of mines and resources, Ottawa have just sent The Call the regulations regarding migratory birds for this year. Open season are both days inclusive and include ducks, geese, rails, coots and Wilson's or Jack-snipe. In that part of Alberta lying north of a line commencing at the intersection of the centre line of the Canadian Pacific Railway with the east boundary of the Province near the town of Compoer to township, thirty-three range one west of the fourth meridian; thence westerly along the centre line of said railway to the town of Lacombe and southerly to town of Red Deer; thence westerly along the centre line of the Canadian National Railway to the right bank (going down stream) of Saskatchewan river near Rocky Mountain House; thence up stream along the said right bank and the right bank of the middle fork of Saskatchewan river to the east boundary of the latter stream at Snow Peak on the western boundary of Alberta to township 33, range 21, west of the fifth meridian; from 12 o'clock noon mid-day September 15 to sundown November 15. In that part of the Province of Alberta lying north of the line defined in the preceding paragraph; from 12 o'clock mid-day October 1 to sundown November 30.

meating

A delicious lunch was then served by Mrs. Justin, Mrs. Burne and Mrs. B. Kley and was enjoyed by all present. The next meeting will be held at Mrs. R. Burne's home on September 18.

THE WORLD OF WHEAT

By H. G. L. Strange, Director of "Crop Testing Plan"

Thatcher, Renown and Apex, the rust-resistant wheats, have been "tried in the fires and have not been found wanting."

This year most unfortunately a rust epidemic visited our prairies, and many farmers who had to depend upon varieties susceptible to stem rust, such as Marquis, Ceres, Empress, Garnet and Red Bobs, have suffered serious losses with their crops both in yield and in grade.

The new rust-resistant varieties, however, have done well, for they have suffered little or no damage from the dread scourge.

Those farmers who are able this last spring to obtain sufficient seed to sow their entire fields are fortunate; those who were not, however, will have the opportunity this coming year of obtaining their full requirements of the seed of any one of these rust-resistant varieties, for good seed will be plentiful and at a reasonable price.

Resistant to stem rust at these new varieties are, however they can only be regarded as "stop gaps", to be replaced as soon as our Canadian plant breeders are able to release for use some of the better rust-resistant strains which the Dominion rust research laboratory now has in the making.

Following actors have tended to the wheat crop in North China: Canada by Australian flour, Continent and United Kingdom, producing U.S. Pacific wheat. Drought and heat have lowered corn yields in southern Europe and Danube Basin. Germany buys United States corn. Severe drought causes wheat crop failure in Spain.

Hordes of autos now remind us of our old days and to stay, And departing leave behind us clouds that are no longer there. When our children pay the mortgage Our fathers made to build those roads. They'll not have to ask the question— "Here's the bondsman's road!"

WHEAT BOARD PROVES TO BE VERY USEFUL UTILITY

It is gratifying to note the degree of solidarity with which the majority of the people of Western Canada have gotten behind the Wheat Board since it was made representative to the government in support of a reasonable initial payment. It is many years since the west showed such an united front.

The fact that there is a Wheat Board today is due to the determined insistence of Wheat Pools of Western Canada. These organizations sent delegation after delegation to Ottawa during the past eight years to press the need of a Wheat Board before the federal government. They also presented the case for a Wheat Board before various governmental inquiries and commissions. In all these activities they had the support of the United Farmers of Alberta, the United Farmers of Canada, Saskatchewan, and the United Farmers of Manitoba, as well as other organizations such as the Association of Rural Municipalities gave appreciated support.

The need for a Wheat Board during the depression years was obvious. In the course of the year the wheat market had been taken out of the economic field and became a political question. Canada was slow to realize what had occurred largely due to the advice of economist of the orthodox school and the grain trade of this country. Their contention was that the depression conditions being experienced by wheat producers were transitory and would shortly disappear.

Of course, the trouble started when the world raised the record wheat crop in 1928 and stock markets collapsed in 1929 when the depression was ushered in. Wheat sank to low prices that in some instances the railways carrying the grain got more for their services than did the producers. The world's surplus piled up until it reached the total of over 1,000 million bushels.

Some people scotchingly said that low prices would increase consumption and the surplus would be taken care of in that way. But consumption did not increase because of low prices. In fact it has remained remarkably even during the past ten years.

The surplus was eventually cleaned up, but by what process?—six years drought in North America, the worst this continent has experienced in fifty years. The Canadian prairies were scorched by year after year of excessive unprecedented drought.

In addition, another large wheat exporting nation, Argentina, experienced to major crop disaster with only one year intervening. In 1935 Argentina had one of the worst droughts in her history and lost a severe frost destroyed at least 70 million bushels of wheat.

So that it took a series of calamities following each other in quick succession in three of the great wheat exporting countries of the world to get rid of the wheat surplus which was really started by the huge 1928 crop, and to restore the price level to a decent figure. Crop disasters of such magnitude will hardly occur in such quick succession again in many countries for a long time to come.

It is just a year since the world wheat surplus was cut down to a reasonable figure and now the 1938 production can be fairly well estimated. It was really started by the huge 1928 crop, and to restore the price level to a decent figure. Crop disasters of such magnitude will hardly occur in such quick succession again in many countries for a long time to come.

There is a fair crop in Western Canada this year. A large number of farmers, who haven't had anything like a crop for six or seven years, will have some wheat this year. The many high prices of the past two years meant nothing to them for they got no benefit from them. This year (Continued on another page)

NO SECRECY HERE

Grain producers can always patronize Alberta Pool Elevators with a sense of security and satisfaction.

That is because of the open policy followed in the conduct of Alberta Pool Elevators' business, together with the fact that the organization is operated on a genuine co-operative basis.

UNITED GRAIN GROWERS

Elevators at: Gleichen, Arrowwood, Cluny, Nakama, Shouldice, Queenstown, Mossleigh, Milo and Standard.

Vanishing Wealth

Whatever may be thought of their proposal that the administration of the natural resources of the country revert to the Dominion government, the statements of the Federal and Ontario Naturalists in their brief to the Royal Commission on Dominion-provincial relations may well give pause for reflection and serious consideration.

Whether or not one agrees that the remedy for existing conditions lies in the principal recommendation, namely that of vesting the control of the resources in the Dominion government, the country at large owes a debt to the Federation for its timely note of alarm which was sounded when the over-exploitation drew to a head, in an uncertain time, the depletion of the soil, the profligacy with which the resources are being dissipated for immediate gain with little or no thought for anything like commensurate measures to ensure their conservation or replacement.

One has only to read the brief to be strongly impressed with the necessity for sterner measures to ensure conservation of this great heritage if the present generation is not to be deprived of many of the advantages, economic and aesthetic, which the conservation of such resources brings and if posterity is not to be entirely stripped.

Startling Losses

That great wastage of a precious inheritance has not only been allowed in the past but is still being practised to the detriment, present and future, of the entire country, is brought home with realistic force. The evidence is writ large on the pages of the brief and the statements cannot well be refuted.

Figures quoted indicate appalling losses to the country as a result of wasteful methods of agriculture and lumbering, resulting in depletion of water supply, exhaustion of the soil, and the loss of valuable timber. The depletion, followed by soil erosion supplemented by further losses to valuable stands of timber from forest fires.

The forest area burned in Canada during 1936 totalled over three million acres, or 4,000 square miles. When added to this is the large amount of timber which is being cut down annually for the lumbering industry, the pulpwood industry, for fuel and for other purposes with comparatively no provision for replacement, and the waste from the lumbering process, these valuable resources will continue to be available and what the effect such continued losses are going to have on the future revenue of the Dominion, on the welfare of that basic industry, agriculture and, in general, on the happiness and prosperity of the people.

Impoverishing The Soil

"It should be remembered," says the Federation, "that the repeated fires throughout large areas of Canada where the soil is thin cause its destruction and make the possibility of future crops of trees on such areas a remote one for hundreds of years to come; the enormous tracts of almost bare rock to be found in many parts of the Dominion are mute evidence of the washing or blowing away of such soil which took centuries to form and which once bore a forest of permanent revenue-producing possibilities."

Not only does the extravagant denudation of the forest resources result in a serious loss to agriculture through impoverishment of the soil, and the drying up of the water supply, but it also results in the loss of other valuable resources and the loss of industries upon which they are based. With forest coverage and food sources gone and running water depleted, the rapid disappearance of wild life such as the fur-bearing animals, once a source of great revenue to the Dominion, and the loss of the game, and native sportsmen and the fish, also a great attraction for tourists and the basis of another of the country's industries, are but a matter of time, and some of these losses are already being experienced.

"In recent years," again quotes the Federation's brief, "the plight of some of our wildlife has become desperate. This is especially true in the case of waterfowl which, depleted by overhunting, have been reduced to very low numbers through drought in their nesting grounds on the prairies. The Eskimo curlew, Labrador duck, passenger pigeon and great auk are now totally extinct, and fear for the continued existence of several species of waterfowl, for the mallards and the moose are widely pressed."

It might also be pointed out that the chestnut, one of the most beautiful, useful and valuable trees is practically extinct in the United States and Canada and that the disappearance of the Douglas fir in 15 years and the white pine in 30 years is predicted by experts.

What Others Say

What authorities in other countries have said of our profligacy and wasteful methods may be summarized in a statement made in 1923 by Professor Troup, head of the Imperial Forestry Institute at Oxford, England, who is well conversant with protective measures adopted in his own and other European countries.

"I was frankly amazed," says he, "when many of my colleagues, at the extent to which the forest had been destroyed with little or no attempt at regeneration. Whenever man has been allowed to do his worst, as in the past, the Dominion and provincial governments cannot now plead that they have not had fair warning as to what will happen if this policy continues. I am in full agreement with the view that the most serious soil problem is the destruction in relation to logging practice to secure natural regeneration and sustained yield."

In the light of the statements made to the Royal Commission, the undoubted fact that the depletion of the soil is a serious problem, and that authorities, national and international, it would seem that something more ought to be done about it than is now being done.

Saddest Man In Tokyo

Citizens Claim Admiral Okada Has Disgraced The Emperor

Admiral Okada, who was Prime Minister of Japan two years ago, is the saddest man in Tokyo to-day. In 1936 a group of Japanese, intent upon a coup d'état, entered Okada's home and murdered the man they found there. Emperor Hirohito thereupon publicly lamented the Admiral's death. The Emperor's grief story was unearthed—that Okada, had escaped assassination and that his brother-in-law, Prince Arima, had been killed. The Emperor, despite his good fortune, Admiral Okada, has lost caste with Japanese citizens, who insist that he should have committed suicide. "The Emperor," he had disgraced the Emperor—so he disgraced him in returning to life, thereby becoming the saddest man in the heart of the "Cariboo" group, the fact that the Emperor had uttered an untruth in lamenting Okada's death.

Modern Alpine Hut

Constructed to shelter out both heat and cold, a hut to keep out mountain air at night has just been opened near Chamoni, France. It will accommodate 20 people. Constructed of duramite, coated inside with asbestos and furnished with asbestos bedding, the hut is fireproof as well as temperature-proof.

At Olund, an isle off the coast of Sweden, men are seen prehistoric stone age remains. The remains are in the form of Viking ships replete with benches for the rowers. 2206

Score Is Even

Ten years ago Chester E. Hea's automobile struck O. J. Scott at a street in just been opened in Glia City, Indiana. Scott's leg was broken. A short time ago Scott's automobile struck Hea's car and knocked him off his bicycle. Hea's leg was broken.

Butterflies taste with their legs, which are 1,600 times as sensitive as the human tongue. Since the year 1591, all the Popes of the Roman Catholic Church have been Italians. 2206

"TURN RIGHT TO OGDEN'S"

When you get pecking with this extra Ogden's Fine Cut, you're on the way to a better life. It's the only feed that's so good to eat when you're out of the house. It's the only feed that's so good to eat when you're out of the house. It's the only feed that's so good to eat when you're out of the house.

OGDEN'S FINE CUT

African Bushmen

Stone Age Men Would Use Poison Arrows To Obtain Food

Unless they are allowed to use poisoned arrows to shoot game, Africa's Stone Age men, the bushmen, will starve to death.

This is the contention of members of the bushmen preservation committee, on which the British government, the South African government, the Southwest African administration and the University of South Africa are represented. The committee was created when a group of the "little brown people" of South Africa last year to pay homage at the coronation.

The trouble is that there is an international convention for the preservation of Africa's fauna and flora, under which the British government is bound to protect the use of poison for hunting.

"If they are to be fed up using poisoned arrows, then they must be provided with firearms if they are not to die of starvation, and to give them firearms would be extremely inadvisable," Senator Boydell, a member of the committee, declares.

Senator Boydell contends that the bushmen could not possibly use enough poison to make any real difference to the fauna of Africa, and that the committee must be able to secure a special reserve for them, where they can live as they have for 15,000 years.

SELECTED RECIPES

SPICED RELISH AND COLD MEAT PLATE

2 1/2 cups water
1/2 cup sugar
1/2 cup lemon juice
1/2 cup vinegar
1/2 cup oil

Shakespeare Up-To-Date

Television Audience Heard Original Words But Saw Modern Costumes

Shakespeare's Julius Caesar was televised in a version showing the men in lounge suits, uniforms and one blazer and white handkerchiefs. The television audience in London saw felt hats, revolvers, gas masks, skyscrapers and dignitars, but heard the original words as the bard wrote them.

"Spare a copper for a poor out-of-work."

"Here is a shilling—call at my shop to-morrow and I will send you."

"No, sir, the shilling will be enough—I am not greedy."

The Poultry Flock

Maintain Sanitary Conditions In Order To Obtain Best Results

Hygiene and sanitation are factors as important to the poultry flock as good stock, clean water, proper feed and range, states W. T. Scott, Head Poultryman, Dominion Experimental Station, Harrow, Ont. Failure to maintain clean and sanitary surroundings is frequently the weak spot in poultry management. Cleanliness is essential, as high mortality and reduced egg production follow disease and impaired vitality. To ensure healthy surroundings remove droppings daily and scatter an absorbent such as sand plaster over the droppings boards. Renew litter before it becomes too dirty, and supply clean water in clean vessels; disease may spread rapidly through the medium of dirty water or containers.

At least once a year, with a hoe and broom, scrape and sweep clean the floors and walls of the poultry house, removing dust and cobwebs, and if running water is available use the hose at high pressure. Paint roosts with a good quality white paint, dustproof, full strength, and spray frequently with a solution of the same product according to the instructions of the manufacturer. The range also demands its share of precaution. Gravel or sandy loam covers the range, and it should be ploughed and cropped yearly and seeded with a quick-growing grass. Sudan grass is palatable and greatly relished. To ensure a good supply, it will cut Sudan grass to about 10 inches high before allowing the birds access to the yards or range. Ideal sanitary conditions are maintained on a two or three year range rotation, a hood crop intervening in the three year rotation provides additional protection against parasites that flourish in contaminated soil.

Strange Water Bug

Able To Make Starch And Fat In Huge Quantities

Discover that a small, barely-visible water animal can make, in 20 days, more starch and fat than the whole United States could eat, was described at the Marine Biological Laboratory, summer workshop of United States scientists.

The animal is a chironomid, a flagellate, so termed from the fact that he swims by lashing with fine, hair-like arms called flagella. Scientists got interested in him because, unlike virtually all other living things, he is able to make starch and fat without light. Starch and fat are two of the three essential foods. Protein is the other.

The amount chironomids can make, said Dr. R. O. Mast, of Johns Hopkins University, is theoretically prodigious.

For example "Dr. Mast wrote in the Collecting Net, a scientific journal, 'in one of our experiments, a single chironomid was kept in a dish, and continued 25 days, at the end of which it was found that it had produced a total volume of 412,000,000 cubic metres. The starch in this mass would be sufficient to feed 19,000,000,000 cubic metres and the fat 6,000,000,000 cubic metres. This is sufficient to supply every individual in the United States with some 70 tons of starch and 20 tons of fat.'"

Buddhist Monk

Trebilcock-Lincoln Wants To Return To His Native Hungary

Hungarian authorities were reported weighing the demand for legal re-entry into his native Hungary of Ignatius Trebilcock-Lincoln, a Buddhist monk, the one-time international agitator and spy and now a Buddhist monk called Chao Kung, "Light of the World."

Trebilcock-Lincoln, 60, wearing the simple habit of a Buddhist missionary, was somewhere in the Balkans, accompanied by six nuns and four monks, all Buddhists. They had intended to establish a Buddhist monastery in Germany. But after sailing from Halifax, the party was refused permission to land in England and was returned to Canada.

He was tried from a life of adventure, she said, and wanted to spend the rest of his life in contemplation at the tomb of his ancestors.

Trebilcock-Lincoln, in 1934 made a spectacular journey across Canada, accompanied by six nuns and four monks, all Buddhists. They had intended to establish a Buddhist monastery in Germany. But after sailing from Halifax, the party was refused permission to land in England and was returned to Canada.

Most fish that swim deep in ocean do not breathe but the fish that do breathe at that depth make them appear gray.

British Train Coming

Coronation Scot Express Will Visit United States In January

The London Midland and Scottish Railway's Coronation Scot express train will visit the United States by ship from England next January, it is announced.

The train, consisting of streamlined locomotive and eight coaches, will enter the United States via Baltimore. On arrival the engine and train will be assembled at and leave for more shops of the Baltimore and Ohio Railroad.

Before going on exhibition at the New York World's Fair at the end of April, the Coronation Scot will make a tour of American railroads entering 38 cities and towns and covering in all 3,121 miles. During the tour, the train will travel under its own power throughout and will be manned by an L.M.S. crew.

The Coronation Scot celebrated its "first birthday" in July, having been in service for one year. It is the first streamlined train between London and Glasgow, covering 401 1/2 miles in 6 1/2 hours.

Streamlined "Coronation" type locomotives which maintain the service hold the British speed record of the train follows the successful visit in 1933 when it was inspected by over 3,000,000 people.

Keeping Tab

Germany Introduces A Family Book To Keep Records Of Families

Under a new law, which has just come into force, Germany has introduced the marriage register. Instead, a "family book" for each family, in which the birth, marriage and death records are kept, is to be kept which will show births, marriages and deaths and be a complete record for all the members of the family.

It is hoped that to "stimulate interest in the family, among members that they are connecting links in a long chain of generations and to awaken a feeling of responsibility for the maintenance of the family and of the German nation."

When people marry in future, new leaves to cover their racial classification, relatives, domestic, etc., will be inserted in the "family book." Offspring of the marriage will be entered in the same pages until such time as they grow up and marry, when a new series of pages will be started for them.

The new law also applies to German abroad and it is hoped that within 30 years, as children grow up and marry, exact details of every German family will be entered up.

Attacked By Wild Bees

Six Camel-Riders In India Were Stung To Death

Six Delhi, India, camel-riders of a passing caravan were stung to death by a swarm of bees in Surinagar, according to the story of the only survivor, the caravan which had just left the jungle, was attacked by bees shortly after the men had lighted a fire to cook their food, just below the bees. The victims, who rode in all directions were pursued by the bees, which stung them to death in half an hour. The survivor, after leaving the camel to take care of themselves.

Molotov was asked why in some country the king may assume the crown when 14 years old, but cannot marry until he is 18.

"Because it is more difficult to rule a wife than a kingdom," was the reply.

Another thing that slows up fighting is the realization that anything you build now will look queer a few years hence.

TO LIVE WELL

The desire to live....at any cost.... is as old as mankind. But the desire to live well....at reasonable cost.... has never been so keen as it is today.

...The one calls for the mere avoidance of the dangers common to us all....but to live really well demands an alert, intelligent acquaintance with the improvements and refinements that are, daily making life better worth living.

Through all progress of the art of living well, advertising....almost alone....has carried the message of new pleasures, protections and economies into every department of our lives.

....and here before you, you will find reliable, straightforward news of tested ways of saving time, effort and money.

Read the advertisements here in your newspaper...they are your guide to what's newest and best

LOCAL NEWS ITEMS CRAIGANTLER AND DISTRICT

Cutting is general this week throughout the Craigantler district. The Deer Lodge Farm is the only one that is bagging so far. Binders are being used by most farmers up to this writing. The grain is not ready for the combine but is expected to be in another week.

Mrs. Eddie Collison and family of Strathmore are visiting with her parents for a couple of weeks.

Miss Jessie Grant is improving a little. She is out of the hospital where she was confined for sometime, but is still under the care of a doctor while staying in Calgary.

Mr. and Mrs. Jack Bailey of Calgary were Sunday visitors with Capt. and Mrs. Grant.

H. B. Grant has been attending some meetings in Strathmore furthering the cause of Unity in the Gleichen constituency.

M. Christensen took his boy to Calgary last week to consult a doctor. Up to time of writing we have not heard the doctor's report.

Quite a number of horses have died in this district from the dread new disease, Mr. Selgensen lost two; Deer Lodge Farms one and Capt. Grant one.

A number of Craigantlerites attended the farewell party given to Mr. Messenger, former postmaster of Standard. Mr. Messenger is leaving for Birmingham, England where he will reside permanently. Mrs. Messenger is already in England.

Mr. and Mrs. Ray Sheets were Sunday visitors with Mr. and Mrs. Henry Dankwerth. They also made a trip to Gleichen.

Journalism began with the men who lit beacons on hills to flash the news of victory or defeat for the nation; it developed with the banner of the fiery cross and the breakneck gallop of the horseman across country; it shed a little of its action and expressed itself in the newsletter written in the old coffee houses. Yet whatever form in which journalism found expression, there can be no doubt that its crusading and liberating power has benefited millions of people, freed them from tyranny and oppression.

Although Turner Valley oil field produced \$5,000,000 in crude oil last year, and in previous years has produced millions in gasoline and naphtha, more money has been put into it than has ever been taken out. The fact is that it may be years before the field as a whole is out of the red. Just now Turner Valley is the object of great interest but many of the stories about it being to the "liquid gold" myths relating to oil. These kind of myths continue through the years to be regarded as realities despite all evidence to the contrary. News of a new well comes out with stories that it has a daily flow of 1,000 barrels or more and people exclaim: "It must be nice to strike easy money like that." They forget that to get a well the producer had to spend \$100,000 to \$200,000 on a gamble, forgetting all about the wells which never come in. There are numerous stories of fortune won but not one word about those lost.

(Continued from page one) WHEAT BOARD PROVES TO BE VERY USEFUL UTILITY

when they have something to sell prices have hit the skids. This is a condition that people should not overlook.

Western wheat producers need a Wheat Board. The outpouring authorities on wheat matters in the world are fairly well agreed that the wheat industry as a whole is geared on too high a productive basis. European importing nations have demonstrated that they are not interested in cheap wheat. Last year there was some relaxation of restrictions on imported wheat by Europe, but the restoration of handicaps in many importing countries is already under way once again. World trade was only 500 million bushels last year and is not likely to be much larger during the 1938-39 crop year, which started recently.

Prospective world supplies of wheat, which include a carryover, are estimated by the United States department of agriculture at 4,850 million bushels, or about 475 million bushels above those of a year earlier.

If Argentina and Australia did not raise a single bushel of wheat this year the world would still have a larger supply than last year by 75 million bushels.

Only unprecedented and unexpected

wheat buying by Europe can improve the world situation appreciably during the next twelve months. In the meantime, price prospect for wheat producers in the large wheat exporting countries is anything but cheerful.—The Budget.

Talking to the Point

Our Classified Advertisers get right down to the point of business. You want something say so in a few well chosen words. The intelligent reader likes that kind of advertisement. When you advertise, talk and that is one reason why our Classified Advertisers are so successful. The best kind of results. Please keep in mind that our Classified Advertisers get right down to the point of business.
